

mobilePLUS & Visibility

A Timely Track & Reporting Solution

As our nation (and the world) is facing an unprecedented challenge, we collectively have a **solution that could assist – and deliver enormous value** in the process.

Organizations may have an immediate need to **start harvesting source data that can be quickly organized and used now**. For some teams, **knowing what you have, where you have it, and where it has been** - can work in everyone’s interest.

High-Value Solution

Provide visibility to your assets (people, places & things), leveraging AIT technology, mobile devices, and database with complete history.

Ready to Use

A pre-configured solution where all components work together, out-of-the-box for work creation, communications, mobile capture, editing results, and reviewing history.

Rapid Implementation

Leverages a proven, documented approach where everything can be installed with automated scripts in a matter of hours or days – not months.

Remotely Managed

Configuration, installation, training, and support may be performed with no travel or on-site requirement by the vendor or the customer due to our prepared materials and a successful approach.

KNOW

WHAT YOU HAVE

WHERE YOU HAVE IT

WHERE IT HAS BEEN

The Components: A pre-built solution package that includes:

- **Windows 10 Tablet** – The Windows 10 version of mobile devices dovetails into the client's existing Windows laptop security policies & procedures for communications with the mobilePLUS Network IIS component.
- **mobilePLUS** – The pre-configured application provides all of the functionality in one package – certified for use with SQL Database, Windows IIS Server, and Windows 10 Tablets.
- **Remote Services** – All of the services for tagging, configuration, installation assistance, training, and go-live support are available immediately – and without travel costs or health risks.
- **Next Generation** – Periodic post-implementation reviews of the Client solution are conducted to determine if any enhancements or changes may improve results – with no impact on previous investment in dollars or resources.

The Challenge: Getting the information to the right people quickly, easily and accurately

- **Existing Operations** – Provide information and awareness with existing practices by adding or more effectively using existing AIT markings and mobile devices
 - **How** – Remotely install the mobilePLUS solution onto existing SQL Database, IIS Server and new or exiting mobile devices (some may be supported or could be supported); deploy using remote training
- **New Operations** – Leveraging AIT capture technology at the beginning provides the 100% visibility and history on tracked data
 - **How** – Use mobile devices to assist with AIT marking, setting up data in the host for future data capture and reposting need

Next Steps: Demonstration and Quote available TODAY

- **60- minute On-line Presentation & Demonstration** – Available on request
- **Configuration Interview** – Conducted by phone to complete a profile of the goals and other pertinent information required for a quotation
- **Optional 2nd Demonstration** – View of the mobilePLUS solution highlighting your preferences for personalizations, implementation approach, and required services
- **Quotation** – Provided based on your requirements and priorities; includes a timeline for implementation and deployment
